

ENGINE

ON-VEHICLE INSPECTION

1. INSPECT ENGINE COOLANT (See page [CO-2](#))
2. INSPECT ENGINE OIL (See page [LU-2](#))
3. INSPECT BATTERY (See page [CH-4](#))
4. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY
5. INSPECT SPARK PLUG (See page [IG-5](#))
6. INSPECT DRIVE BELT

- (a) Visually check the driver belt for excessive wear, frayed cords, etc. If any defect is found, replace the drive belt.

HINT:

Cracks on the rib side of a drive belt are considered acceptable. If the drive belt has chunks missing from the ribs, it should be replaced.

EM

7. INSPECT IGNITION TIMING

NOTICE:

- Turn all electrical systems OFF.
- Operate the inspection when the cooling fan motor is turned OFF.

- (a) Warm up the engine.

- (b) When using the intelligent tester.

- (1) Connect the intelligent tester to the DLC3.
- (2) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / IGN ADVANCE.

- (3) Inspect the ignition timing during idling.

Ignition timing:

7 to 24°CA BTDC during idling

(Transmission in neutral position)

- (4) Check that the ignition timing advances immediately when the engine speed is increased.

- (c) When not using intelligent tester.

- (1) Using SST, connect the terminals 13 (TC) and 4 (CG) of the DLC3.

SST 09843-18040

NOTICE:

Be sure not to connect the terminals wrongly. It causes breakage of the engine.

- (2) Remove the air cleaner.

- (3) Pull out the wire harness as shown in the illustration.
- (4) Connect the tester probe of a timing light to the wire of the ignition coil connector for No. 1 cylinder.

NOTICE:

- Use a timing light that detects the first signal.
- After checking, be sure to wrap the wire harness with tape.

- (5) Inspect the ignition timing during idling.

Ignition timing:

**8 to 12°CA BTDC during idling
(Transmission in neutral position)**

- (6) Remove the SST from the DLC3.
- (7) Inspect the ignition timing during idling.

Ignition timing:

**7 to 24°CA BTDC during idling
(Transmission in neutral position)**

- (8) Install the air cleaner.

8. INSPECT ENGINE IDLING SPEED**NOTICE:**

- Turn all the electrical systems OFF.
- Operate the inspection when the cooling fan motor is turned OFF.

- (a) Warm up the engine.

- (b) When using the intelligent tester:

- (1) Connect the intelligent tester to the DLC3.
- (2) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ENGINE SPD.
- (3) Inspect the engine idling speed.

Idling speed:

650 to 750 rpm (Transmission in neutral position)

- (c) When not using the intelligent tester:

- (1) Using SST, connect the terminal 8 (TAC) of the DLC3.

SST 09843-18030

- (2) Race the engine speed at 2,500 rpm for approximately 90 seconds.
- (3) Inspect the engine idling speed.

Idling speed:

650 to 750 rpm (Transmission in neutral position)

**9. INSPECT COMPRESSION**

- (a) Warm up and stop the engine.
- (b) Remove the circuit opening relay.
- (c) Remove the V-bank cover.
- (d) Remove the air cleaner assembly.

- (e) Remove the ignition coils.
- (f) Remove the spark plugs.
- (g) Inspect the cylinder compression pressure.
 - (1) Insert a compression gage into the spark plug hole.

SST 09992-00500

- (2) Fully open the throttle.
- (3) While cranking the engine, measure the compression pressure.

Compression pressure:

1,300 kPa (13.3 kgf/cm², 189 psi)

Minimum pressure:

1,000 kPa (10.2 kgf/cm², 145 psi)

Difference between each cylinder:

100 kPa (1.0 kgf/cm², 15 psi)

NOTICE:

- Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.
 - Inspect the other cylinders in the same way.
 - Measure the compression in as short a time as possible.
- (4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat steps (1) through (3) for cylinders with low compression.
 - If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
 - If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage from the gasket.

10. INSPECT CO/HC

- (a) Start the engine.
- (b) Run the engine at 2,500 rpm for approximately 180 seconds.
- (c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
- (d) Immediately check the CO/HC concentration during idling and/or at 2,500 rpm.

HINT:

- Complete the measurement within 3 minutes.
- When carrying out the 2 modes (idling and 2,500 rpm) test, the measurement orders are prescribed by the applicable local regulations.

- (e) If the CO/HC concentration does not comply with regulations, troubleshoot in the order given below.
 (1) Check the heated oxygen sensor operation.

CO	HC	Problems	Causes
Normal	High	Rough idling	1. Faulty ignition: <ul style="list-style-type: none"> – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: <ul style="list-style-type: none"> – PCV hoses – Intake manifold – Throttle body – IAC valve – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idling (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI systems: <ul style="list-style-type: none"> – Faulty pressure regulator – Faulty engine coolant temperature sensor – Faulty mass air flow meter – Faulty ECM – Faulty injectors – Faulty throttle position sensor
